### ***YOUR NEW ALFA-CLUB IS DIFFERENT!***

Congratulations, your new ALFA-Club rally clock has been completely redesigned from scratch. It has all of the functions and features of the previous model ALFA-Club, plus these:

- Clock Mode Features:
  - 12 and 24 hour time modes.
  - Switch from seconds to hundredths, or even 1/10 seconds or thousandths, without losing time or memory.
  - 3 times the split memory capacity. (99 splits vs 30)
  - Sync time with all previous ALFA Rally Link<sup>(tm)</sup> equipped clocks.
- Odometer Mode Features:
  - Accurate, Factor Corrected, Speedometer.
  - Sending Unit Installation and Test Mode.

We are currently working on new software features which will be available to you for no charge other than shipping. These are expected to include:

- Automatic Factor Calculation.
- Timewise Clock Synchronization.
- "In The Field" Clock Calibration.
- Ability to Store Settings and Split Memory when powered down.

Your ALFA-Club also has provision for a built-in GPS (available at additional cost) which can provide continuous time sync and an alternate odometer source. You will be notified when the GPS hardware and software are available.

Finally, if you own older ALFA clocks, you will notice that the connector has been changed. The old style DIN connector was getting hard to find and expensive, and the DB9 connector is easy to find and inexpensive. We have a low cost adapter available so you can synchronize the old and new clocks together.
